## **TIK Engine Parts Installation Process**

Start from the year of 1986 until now, TIK has the ability to provide the 220mm size heavy duty pistons. For implementing ultrasonic ring carrier checking device, we can approve our quality and make sure the piston are durable within the engine. With having more than 30 years diesel piston design experience, we can provide thorough solution with accurate application once we receive customer's demand. By providing excellent quality, TIK Engine Component is one of the most reliable piston providers for AM market in the globe.

### **Piston**

Piston and pin are carefully tested before sending to the market. Those items are lubricated with anti-rusted oil and then packed. Its highly recommend to equip each piston set with its own pin and cylinders as those items have been check the fitness of each other before sending to the individuals. Fitting of pistons have to be done according to the sign at the piston crown for the installation direction.

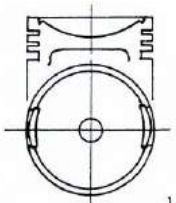

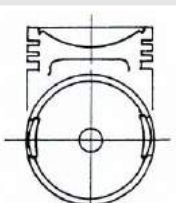

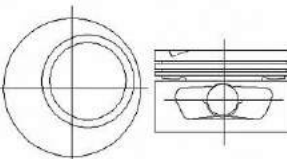

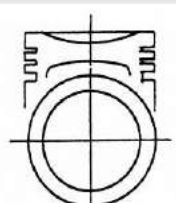

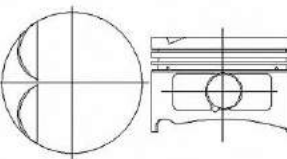

### **Rings**

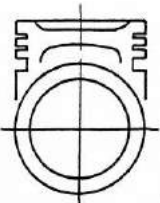

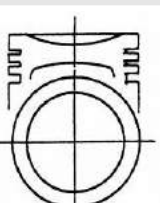

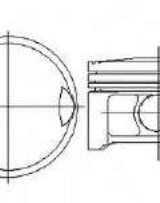

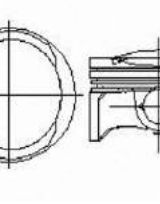

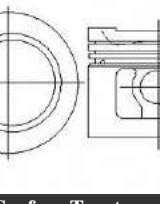

Rings fitting need extra careful during the installation. With the installation mistake for the rings might leads to permanent deformation and affect the performance of the engine. The ring gaps have to be distributed evenly around the piston ring groove area.

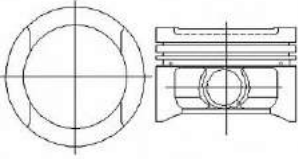

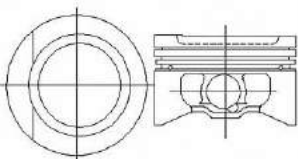

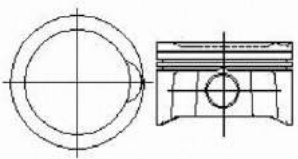

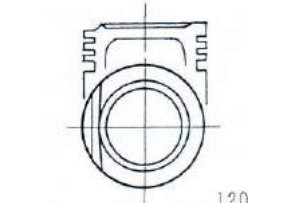

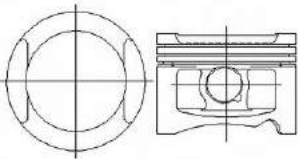

### **Liner**

Linners with centrifugal casting are manufactured according to the original design and specifications. For those high accurate cylinder.

Extra care has to be implemented as all those items need to be cleaned thoroughly. Oil and oil filter must be changed in proper period of time to decrease the risk of broken and engine.
